Kickstart your Kubernetes.

Kubernetes done right, done in days.

Kubernetes clusters are hard to deploy if you don't have experience with them. Deploy it yourself, and you risk mistakes that may not be evident until after you are in production. Lock into a managed Kubernetes platform, and you may not have the flexibility you need, while being subject to higher costs.

Kickstart Experience

A Sidero engineer will discuss your planned environment and your storage, network and other needs. Within a week, they will deliver a production ready cluster on the environment you specify.

You can run workloads confidently, without worrying if misconfiguration is going to cause issues. Your team will benefit from running a cluster architected to best practices. Your business will benefit from accelerating the move to Kubernetes, and the agility that comes with it.

Right Design, Right Price

With our Kickstart offering, you get a production ready Kubernetes cluster with best practices architecture and security deployed in days, not months.

Because we build upon Talos Linux, we can deploy Kubernetes and the components needed to accelerate your projects efficiently, with the flexibility to handle whatever your requirements are.

AWS, GCP, Azure. Bare Metal, VMware – we can get you up in the environment you want, quickly and securely.

Pricing $10,000 fixed

Includes:

- 1 production ready cluster running on Talos Linux secure OS
- securely configured Kubernetes
- Ingress controller
- CNI for networking
- Persistent storage
- Load balancing

Secure. Stable. Supported. Simple. Sustainable.

Inherent control. **Infinite adaptability.**
